

VETLIG

NEW TECHNIQUE FOR CRUCIATE LIGAMENT REPLACEMENT (CRCL)

Speaker:

Dr Jacques-Phillipe Laboureau, Le Tignet, France

Orthopaedic surgeon, specialized in knee, arthroscopy and sports traumatology. Member of: S.O.F.C.O.T., S.I.C.O.T., ISAKOS. Developer of LARS (Ligament Advanced Reinforcement System). Since 2010 he has concentrated on small animal specific synthetic ligaments and tendons, as well as their surgical techniques. Founder of VetLig Global.

Professional Support:

Dr Shane Guerin, Cork IRE

MVB, MACVSc, Cert SAO, DVCS, DipL. ECVS, MRCVS

Course Program:

Friday, 12th February 2021

- 09.45 – 10.00 Registration and hand out of documents
- 10.00 – 10.10 Welcome and introduction – EICKEMEYER®
- 10.10 – 11.10 Development of the VetLig Global ligaments from the human experience – Dr Laboureau
- 11.10 – 11.50 Operative Technique – Dr Laboureau
- 11.50 – 12.30 Results and French experience – Dr Laboureau
- 12.30 – 13.15 Lunchbreak
- 13.15 – 17.00 **WetLab VetLig** – Team

This Program is Subject to Change!

Overview:

The tear of the anterior cruciate ligament is still one of the most common orthopaedic injuries in a dog. Thoughts often arise about replacing the Cruciate Ligament with an anatomically correct solution, instead of changing the forces acting in the joint. This course offers you the opportunity to get an overview of newly developed intracapsular technology. In this technique, an artificial band is used as a total replacement for the anterior cruciate ligament using tunnel-tunnel-technique. The structure of the ligament has intraarticularly parallel fibres, just like the natural cruciate ligament. The ligament is fixed in the tibia and Os femoris by means of interference screws in drill channels.

Target Audience:

The course is not only for specialists, but also for vets in general practice who would like to expand their range of knee surgery or try something new or alternative. The relevant anatomy, pathology, meniscus problem is treated completely. Orthopaedic and surgical experience is an advantage for participants of this course.

What you will learn:

The aim of this new and innovative cruciate ligament surgery method is the anatomically correct reconstruction of the anterior cruciate ligament using an artificial ligament without extensive instruments.
