CRYOSURGERY FOR PETS IS **FAST**, **SAFE** AND **EFFECTIVE**

WITH NO ANESTHESIA NEEDED!

What is cryosurgery?
Cryosurgery is a common, minimally invasive procedure that destroys unwanted skin tissue by freezing it. The technique has been successfully in use for over a century.

What is Freezpen?
Freezpen is an innovative device that makes cryosurgery easier and more precise than ever. For your pet, that means no pain, minimal stress, and no anesthesia.
For you, that means peace of mind.

IS CRYOSURGERY RIGHT FOR YOUR PET?

If you've noticed something on your pet's skin that concerns you, or that appears to bother your pet, ask your vet about the best course of action. It may be easier to treat than you think!

Freezpen can treat most common animal skin issues quickly, painlessly, and effectively – with no need for anesthesia. This includes adenoma, distichiasis (extra eyelashes), epulis, eyelid adenoma, meibomian gland dysfunction, sarcoid, warts, and other easily treatable issues.

Sebaceous adenoma

Zyste

Sarcoid

Perianal adenoma

Eyelid tumor

Ear tumor

Epulis

Tumor

Adenoma

ASK ABOUT OUR **INNOVATIVE TREATMENT METHOD**

How does it work?

Freezpen is a pen-like device that uses a powerful microjet of nitrous oxide to freeze skin tissue to -89°C.

Your vet simply points the Freezpen at the lesion and presses a trigger to spray gas for 2-45 seconds, depending on the size and depth of the lesion

Only the lesion itself is frozen – the surrounding skin is left untouched.

The frozen tissue forms a scab that will fall off after about a week.

Number of treatments
Usually 1-6, depending on your pet's response.

Procedure time
Less than 60 seconds per lesion.

Anesthesia-free
No costly sedation that could put your pet at risk.

Treatment intervals
10 days between treatments.

SEE

THE FREEZPEN IN ACTION!

SIMPLE PROCEDURE
No prep needed, just fast, effective freezing in two short applications.

SIMPLY PAINLESS
Low stress for your pet, with no pain, incisions, or anesthesia.

SIMPLY PRECISE
Ultra-fine jet means only damaged ordiseased tissue is targeted.

SIMPLY PERFECT
Completely removes lesions or tumors, with little to no scarring.
