EickLoxx Large

A universal osteosynthesis system for small animals
between 15 and 45 kg

EICKLOXX LARGE OSTEOSYNTHESIS SYSTEM – COMPONENTS AND CHARACTERISTICS

The newly developed EickLoxx Large is an angle-stable osteosynthesis system for dogs with a weight of approx. 15–45 kg.

Just like the EickLoxx Small, the system is characterised by a polyaxial placement of the precisely shaped screws and thus combines the advantages of angle-stable systems and the possibility of placing the screws at an angle of up to $\pm 15^\circ$. Like the EickLoxx Small, the EickLoxx Large offers the advantage of rapid fracture healing with improved implant strength. For this reason, the removal of screws and plates is rarely indicated here.

The biocompatible titanium S-shaped plates are available in eight different sizes. Thanks to special tools, the plates can be bent on all three planes. The long 12- and 14-hole plates as well as the long 34 to 40 mm screws (\varnothing 2.7 / 3.5 / 4.0) are not included in the basic set and can be added if required. There is space in the implant tray for the long plates and capacity for the module of the long screws in the instrument tray.

Titanium EickLoxx Large Bone Plates

- Bendable in multiple planes
- Multi-directional locking
- System 2.7/3.5/4.0
- 6 EickLoxx Large Bone Plates 4.0 mm, light blue (6–10 holes)
- 6 EickLoxx Large Bone Plates 4.3 mm, gold (6–10 holes)

187740–187745 / 187750–187755

Titanium Locking Screws

- Self-drilling/self-tapping
- 36 Titanium Locking Screws \varnothing 2.7 mm, light blue (from 10–32 mm)
- 36 Titanium Locking Screws \varnothing 3.5 mm, magenta (from 10–32 mm)
- 36 Titanium Locking Screws \varnothing 4.0 mm, blue (from 10–32 mm)

The geometry of the screw head and screw enables polyaxial placement with the Drill Guide System in $\pm 15^\circ$ longitudinal and transverse pivoting.

185460–185463 / 185535–185545 / 185570–185581 / 185590–185597 / 185600

Characteristics

- EickLoxx Large Bone Plates minimise contact with the periosteum. This reduces the iatrogenic load on the bone perfusion (common in conventional compression plates).
- Preservation of the bone perfusion significantly reduces the risk of infection and accelerates bone healing.
- The risk of infection is further reduced through the biocompatibility of titanium and the absence of fretting.

Biological Benefits

- Reduces damage to the vascular supply
- Increases resistance to infection
- Accelerates healing
